JIAWEI (ETHAN) LIU

Newark, NJ | ethanjw.liu@rutgers.edu | www.linkedin.com/in/jiawei-ethan-liu/

EDUCATION

Rutgers University — *Newark, NJ*
PhD in Management, Strategy & International Business — *Aug 2025 – Present*
Coursework: Strategic Management, Global Political Economy, Non-Market Strategy, Causal Inference, Machine Learning, Organization Theory.

Brandeis University — *Waltham, MA*
M.A. in International Economics & Finance, Data Analytics (STEM) — *Aug 2021 – May 2023*

Southwestern University of Finance and Economics — *Chengdu, China*
B.S. in Finance, First-Class Academic Scholarship (Top 1%) — *Aug 2016 – Jun 2020*

University of California, Berkeley — *Berkeley, CA*
Berkeley Global Access Program (Exchange) — *Aug 2019 – Dec 2019*

PROFESSIONAL EXPERIENCE

North Dakota State University, Economic Policy Research Specialist — *Oct 2023 – Jun 2025*

- Performed two-stage regression analyses on bilateral state-to-state migration data (2010–2023) compiled from U.S. Census ACS, BEA, and BLS sources to identify determinants of net migration flows, focusing on variables such as economic freedom, job openings, personal income growth, tax burden, union density, and government expenditures.
- Partnered closely with the Great Plains Food Bank to translate stakeholder needs into analytical metrics, and built county-level dashboards benchmarking food insecurity against national trends. Quantified a **$47.8M aid shortfall** and presented the findings in legislative discussions and in media including the Jamestown Sun, WDAY TV, and Bismarck Tribune.
- Framed public higher-education funding as an optimization problem by modeling graduates' lifetime earnings, retention probabilities, wage growth, and tax contributions, and built a data-driven ROI framework to evaluate alternative funding allocations across majors and delivery modes (online vs. in-person). Conducted stress testing and counterfactual analysis under varying assumptions on retention rates and earnings trajectories, evaluating the robustness of funding outcomes across scenarios.
- Quantified the impact of Non-Tariff Measures (NTMs) on African agricultural exports. Applied PCA, clustering, VARMA time series, and intervention analysis; revealed significant reductions in agri-food trade volumes and identified heterogeneous impacts among countries at various development stages. Proposed solutions to mitigate these effects, including stronger external assistance, greater trade liberalization, and deeper economic integration.

Brandeis University, Energy Industry Research Assistant — *Mar 2023 – Sep 2023*

- Prepared global renewable energy data (solar, wind, hydro) with Tableau Prep and visualized them in Tableau, creating scatterplots, boxplots, and heatmaps. Identified energy development patterns for developed and developing countries, performed regression analysis to verify these patterns, refined results by removing outliers, and made investment recommendations.
- Analyzed the impact of anti-dumping and countervailing investigations on the Chinese photovoltaic industry, uncovering the restructuring of supply chains to third countries through FDI.

SELECTED RESEARCH PROJECTS

- **Modern Mercantilism, Market Fragmentation & Corporate Global Strategy.** Studies how industrial policy, trade and investment restrictions, and technology controls fragment global markets, and how firms adjust their global scope, supply chains, and organizational design in response.
- **AI Analysis of Corporate Political Signaling in Earnings Calls.** Classifies thousands of S&P 500 earnings-call transcripts with an LLM and pairs the results with an event study on CRSP returns to test how firms' political-risk disclosures relate to market reactions.
- **FDI and Income Inequality.** Builds a panel of 115 countries (1995–2022) and applies country and year fixed-effects models to test whether inward FDI raises within-country income inequality before its effect levels off.

TECHNICAL SKILLS

Analytics & Programming: Python (pandas, scikit-learn, machine learning, time series, Monte Carlo), R, MATLAB, SQL
Causal Inference & Statistics: Difference-in-Differences, RDD, Instrumental Variables, panel fixed-effects, two-stage regression, PCA, clustering, VARMA
Tools & Data: Tableau, Power BI, Bloomberg, Capital IQ
